investment risk in actively managed exchange traded funds, comprising:

a trusted computer system; and

a computer storage medium storing a computer program product for determining the basket of instruments for hedging investment risk, comprising instructions for causing the computer to:

receive or determine factor information about the actively managed exchange traded fund holdings, wherein the factor information measures ~~the sensitivity~~ sensitivities of the fund holdings to factors that affect the price of the fund; and

select a portfolio of financial instruments to produce a hedging portfolio with substantially the same ~~sensitivity~~ sensitivities to the factors that affect the value of the fund, wherein the specific securities in the actively managed exchange traded fund are unknown to an entity who uses the hedging portfolio to hedge against an investment in the actively managed exchange traded fund.

16 (previously presented). The system of claim 15 wherein the computer program further comprises instructions to:

use the hedging portfolio to hedge a position taken in the exchange traded fund.

17 (previously presented). The system of claim 15 further comprising instructions to:

apply factor analysis to the exchange traded fund to determine the sensitivity of the fund holdings to the factors.

18 (previously presented). The system of claim 15 wherein the factors include economic activity, inflation rates or other factors that are related to measures of economic activity.
